

Impacts of Recent Hurricanes on Markets and Energy Infrastructure

Presentation to Baton Rouge Chamber of Commerce Leadership Course: Integrating Environment With Business and Culture

November 8, 2005

David E. Dismukes
Center for Energy Studies
Louisiana State University

Summary on Impacts of Hurricanes

- Hurricanes were incredibly destructive to energy business and ramifications are going to be long lived (locally and nationally).
- Hurricanes created more destruction than offshore production – storms clearly showed the interrelationship of all types of energy infrastructure in the Gulf – the “4 Ps” – production, processing, pipes, and power.
- Hurricanes created more destruction than just that along the Gulf – price ramifications were felt nationally – and impacts felt globally in energy markets.
- In the near term, this will be the most expensive heating season on record for American consumers.
- Price and supply wildcards: weather and industrial activity. The claims of demand destruction potentially overstated in very near term – not in intermediate to longer term.
- Energy markets are likely to not be back on their feet prior to the next hurricane season.
- Potentially setting ourselves up for a **major** “supply-demand” realignment.

Refineries Impacted by Katrina Gulf Coast, Port Arthur and Lake Charles

Company	Location	Processing Capacity (barrels per day)	Status (as of August 31)
ExxonMobil	Baton Rouge, LA	493,500	reduced runs
ChevronTexaco	Pascagoula, MS	325,500	shutdown
Citgo	Lake Charles, LA	324,300	total supply loss
ConocoPhillips	Belle Chasse, LA	247,000	shutdown
Marathon	Garyville, LA	245,000	shutdown
ConocoPhillips	Lake Charles, LA	239,400	total supply loss
Motiva (Shell)	Convent, LA	235,000	shutdown
Motiva (Shell)	Norco, LA	226,500	shutdown
Total	Port Arthur, TX	211,500	reduced runs
ExxonMobil	Chalmette, LA	187,200	shutdown
Valero	St. Charles	185,000	shutdown
Murphy	Meraux	120,00	shutdown
Valero	Krotz Springs, LA	80,000	reduced runs
Shell Chemical	Saraland, AL	80,000	?
Shell Chemical	St Rose, LA	55,000	shutdown
Placid Oil	Port Allen, LA	48,500	reduced runs

Single Well Caisson – Western GOM

Damaged Single-Well Caisson: The vast majority of damage occurred to small, older platforms. Damage ranged from stripping of decking and rails to bending of well jacket and in some cases total removal of all above sea level structural components.

Temporary Natural Gas Release: To date, all subsea safety valves have held. There have been a couple of incidents where pipeline damage has allowed the temporary venting of gas that was in the pipeline. There are currently no known incidents of gas venting from wells and the temporary venting from pipelines appears to have stopped.

Longer Run Impacts of Hurricanes Katrina and Rita

Estimated Decrease in Refining Production from both Katrina and Rita

Refining capacity should return to normal soon, but there will be a stubborn
five percent of total capacity that has unknown return date – not good for tight markets

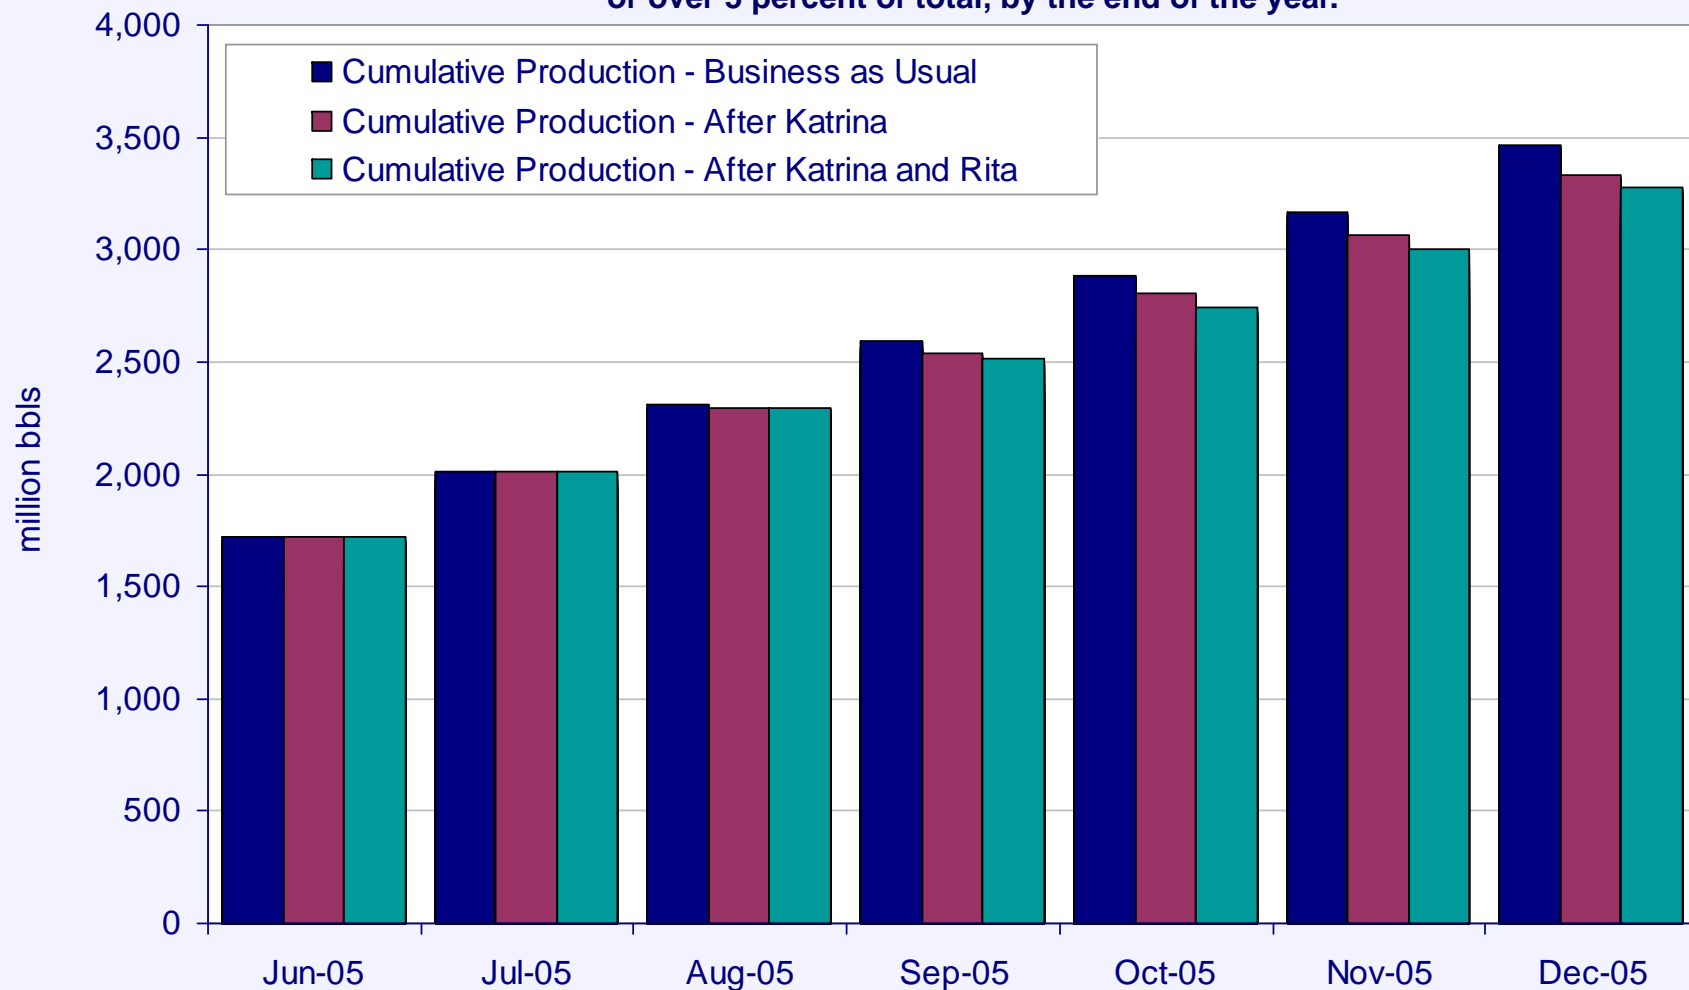

Source: Assumes 95 percent capacity factor; assumes 4 week recovery for facilities damaged by Rita.

Cumulative Refining Production

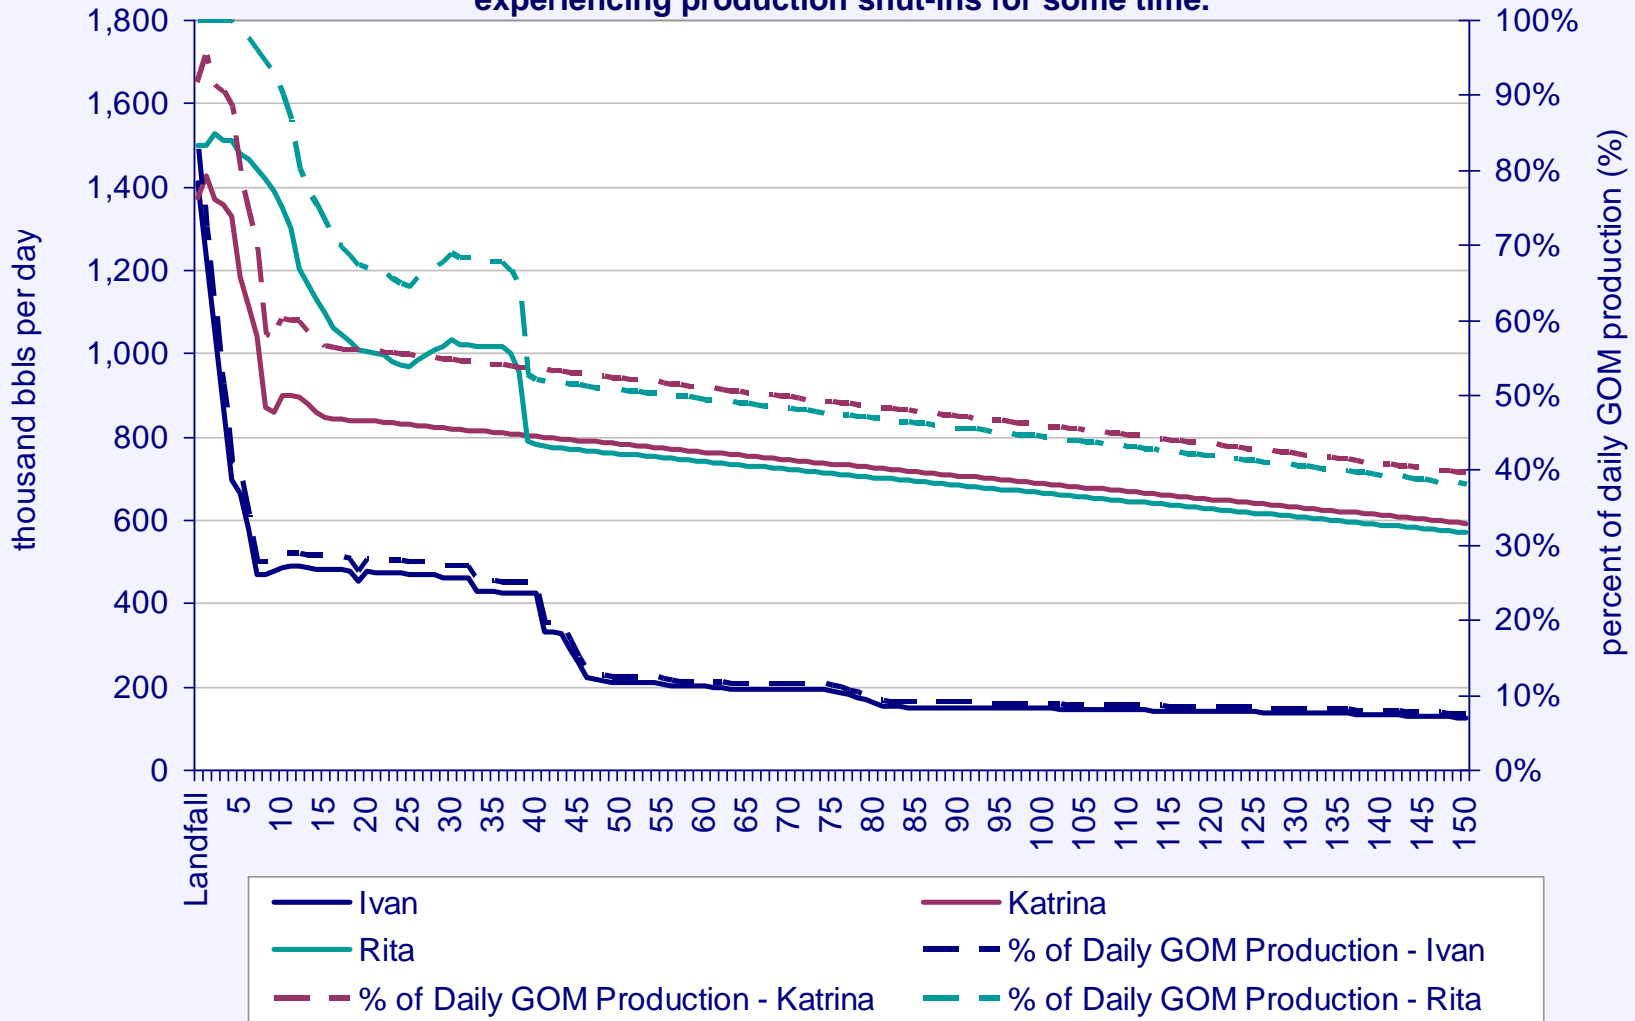

Impacts of Katrina result in a loss of 136.5 million barrels, or 4 percent of total production, by the end of the year. Impacts of Katrina and Rita result in a loss of 188.7 million barrels, or over 5 percent of total, by the end of the year.

Estimated Return of Existing Crude Production

If crude production returns follow path similar to Ivan, we could still be experiencing production shut-ins for some time.

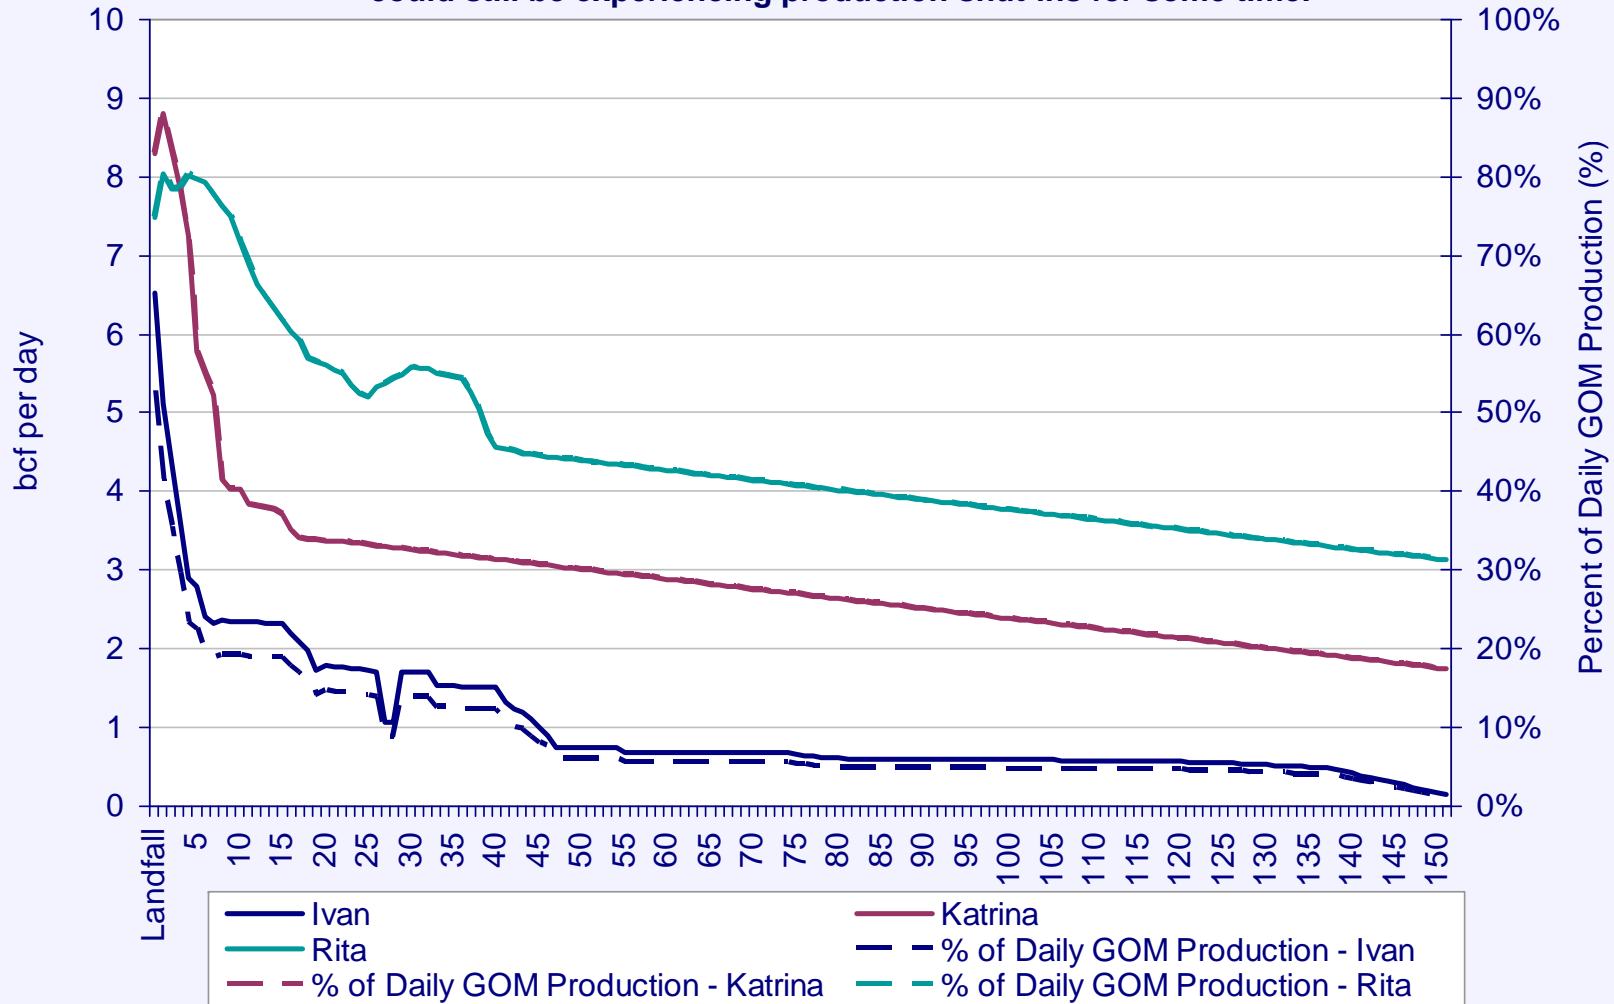

Note: Assuming recovery of 2,685 barrels per day for remaining days.

Estimated Return of Existing Natural Gas Production

If natural gas production returns follow path similar to Ivan, we could still be experiencing production shut-ins for some time.

Note: Assuming recovery of 12.53 bcf per day for remaining days.

Forecast for Energy Commodity Prices Heating Oil Futures

Note: Prices recorded on November 7, 2005

Source: Energy Information Administration, Department of Energy; and Nymex.com

Fall Signal (Sep-Oct)	Winter Signal (Nov-Mar)	Overall 6 Mo. Market Trend
Bullish , weather, supply concerns Range: 12.00 - 14.00	Bullish , weather, supply concerns - daily super spikes probable Range: 13.00 - 16.00	Bullish , low injections, set up chronic tight market conditions -- potential lows going into next injection season Range: 12.00 - 16.00

- Short term (September-October) weather futures prices are bullish for natural gas in the South and West, but neutral in the East and Midwest
- Forecast of \$58 to \$70 crude through the end of 2006. Refining capacity challenges will keep pressure on refined product prices.
- Diminishing natural gas surpluses especially in the aftermath of Katrina and Rita. Storage forecasts combined with production shut-ins call into question the supply adequacy heading into the winter season given our preliminary winter assessments. Is 3.2 tcf adequate in the face of 50 percent plus shut-ins?
- Katrina and Rita impacts felt until next hurricane season.
- Usage wild cards: weather & industrial activity
